Current position

Ph.D. Candidate, University of Washington, Seattle

Research Interests

I work at the intersection of harmonic analysis, geometry, and dynamics, and I study two primary objects: translation surfaces and metric graphs (tropical curves). Both objects are forms of a singular manifold, and I hope to connect the Laplacian to *dynamical* and *algebraic* properties of these objects.

Education

2022	PhD in Mathematics, University of Washington (expected)
2019	MSc in Mathematics, University of Washington
2009	BSc in Mechanical Engineering, Minor in Music, Columbia University

Work Experience

2009-2016	Senior Mechanical Engineer and Sustainability Consultant, BuroHappold Consulting Engineers, New York
-----------	--

Honors & awards

2020-2021	Nominated for Excellence in Teaching Award, University of Washington
2018-2019	Excellence in Teaching, University of Washington Mathematics Departmental Award

Papers

2021	Superdensity and bounded geodesics in moduli space, preprint
2021	Shrinking targets on primitive square-tiled surfaces, arXiv:2104.09634 , submitted
2019	The Laplacian: An Exploration and Historical Survey Tailored for Translation Surfaces, Master's Thesis, pdf

Mentorship

Spring 2021	Washington Directed Reading Program: M.C. Escher and Hyperbolic Tesselations, Mentee: Emma Favier sites.uw.edu/wdrp/spring-2021
